

Huawei K3565 (Vodafone)

manufacturer:	Huawei
model:	K3565
interface:	USB 2.0 (A plug)
GSM frequency bands:	850, 900, 1800, 1900
UMTS frequency bands:	900, 2100
HSDPA:	3,6 MBit/s
HSUPA:	-
EDGE:	236,8 KBit/s
GPRS:	57,6 KBit/s
CSD:	?
connector for ext. antenna:	+ (covered by housing)
connector type:	CRC9
internal antenna diversity:	+
voice telephony:	+ (enabled by default)
NAND-flashmemory:	+ (80 MB)
microSD-drive:	+ (up to 8GB)
hardware versions:	CD25TCPU
rebranded versions:	Vodafone K3565-H

Vodafone sells two different versions of the K3565:

- K3565-H which is a Huawei [E160X](#) (Rev.2 models carry the hardware ID "K3565 - Rev.2" printed on the back of the device)
- [K3565-Z which is produced by ZTE](#)

Those two version are not only produced by two different companies, but they are also technically total different. Since the K3565-Z was introduced by Vodafone only in 2009, the earlier version from Huawei was only designated K3565 (without "-H").

Unlocking

unlock codes are available free of charge at <http://a-zgsm.com/huawei.php>

To unlock your device, put in a third-party SIM card, start Mobile Partner and after entering the PIN code, the unlock code will be required.

Debranding

see [debranding Huawei modems](#)

Disable/revive flashdrive

The integrated flashdrive of the E160 can be disabled by executing the following AT-command:

```
at^u2diag=256
```

If your modem answers ERROR, instead you can use command:

```
at^u2diag=0
```

Unfortunately this command will also disable the microSD-drive.

To revive the flashdrive and the microSD-drive execute:

```
at^u2diag=255
```

yance	Vodafone K3565 (Huawei) bricked :-' Thread started: Apr 15 2012, 12:07 PM EDT Watch	0	Apr 15 2012, 12:07 PM EDT by yance
	Hi, Not sure if anyone can suggest anything to help but here goes: I found this modem lying around with an old, now expired vodafone SIM. After some googling I thought I should be able to unlock it and enable voice. Unlock worked fine and I've had it going on a cpl of laptops. I updated the firmware to the latest version (11.609.10.00.00.B716) and all was working OK. I then tried to enable voice with the AT command AT^CVOICE=0. I then also issued another cpl of commands (because I copied and pasted the wrong one and also because I didn't know what I was doing) which were AT^U2DIAG=255 and AT^U2DIAG=267 - Anyway, following a reboot the result is it's no longer detected as a modem. (Same in 2 other PCs) and hence I can't do anything including issuing other AT commands that may reverse it (because there's no device to point them at). I appreciate it serves me right but I wondered if there's anything I can attempt before I throw it out? Cheers for any help Steve Keyword tags: E160 E160G E160E E160X K3565 unlock code unlock code for E160
